CLEAN AIR HAMILTON CRITERIA SCORING MATRIX - EXISTING PROJECTS

Criterion	Score
Section 1.0 Organizational Information	5
Board of Directors / Governing Body	3
Board of Directors positions, specialization, and contact information included	3
Governing Body positions, specialization, and contact information included	2
Claims Board of Directors or Governing Body exists, but information is incomplete	1
Claims Board of Directors or Governing Body exists, but no supporting information	
provided	0
No Board of Directors or Governing Body	0
Profit / Non-Profit	2
The organization is a registered non-profit organization OR a for-profit organization	
partnering with a non-profit organization (charitable number optional)	2
The organization suggests it is non-profit or for-profit partnering with a non-profit and	
provides supporting information	1
The organization suggests it is non-profit but no supporting information is supplied	1
The organization is for-profit that does not have partnering non-profit or does not have partnering non-profit or does not have	
definition of Non-Profit from guidelines glossary	DNQ
Section 2.0 Organizational Capacity	15
Mission / Mandate	3
The organization has a clear, focused, and comprehensive mission / mandate	3
The organization has a satisfactory mission / mandate vision or values statement	2
Incomplete or not clearly stated mission / mandate	1
The organization does not have a mission / mandate	
The mission / mandate of the organization does NOT fit with the definition of	
Environmental Organization from the guidelines glossary	DNQ
Strategic Plan	3
Submitted a complete Strategic Plan that fits the mandate of the organization and was	
developed / revised within the last 5 years	
Submitted a complete Strategic Plan that fits the mandate of the organization and was	
not developed / revised within the last 5 years	
Has no formal document in place, but provided a summary or outline of the key strategic	
directions of the organization	
Strategic plan does not meet the stated mandate / mission of the organization	
No strategic plan information provided	
Implementation Team Experience	3
Comprehensive team list that clearly identifies project team members and how their	
skills / expertise will help the project be successful	3
Partial list of team members list that includes the skills of each, <u>but no</u> information regarding how their skills of expertise will help the project be successful	

	List of team members <u>does not</u> include the skills of each <u>and</u> includes no information	4
	regarding how their skills of expertise will help the project be successful Community Representation	2
	Response provides comprehensive and succinct information on how their leadership	2
		_
	represents the community Response provides satisfactory information on how their leadership represents the	2
		4
	community	1
	Incomplete / unclear response Current Leadership	2
	Current Leadership	
	Three lines below plus: Has Working/Steering Committees/Groups that oversee	2
	Two lines below plus: Governing body is a skill-set based board and finds Best Practices	
	ongoing	1
	Line below plus: Financial Information is reviewed on a regular basis	
	Meets at least 4 times per year as a Board (or group)	
	Incomplete / unclear response	
	incomplete / unclear response	
	History	2
	Comprehensive and succinct response that clearly describes the history of the	
	organization and indicates important milestones / changes	2
	Satisfactory response that describes the history of the organization and indicates	
	important milestones / changes	1
	Incomplete / unclear response	(

O Project Management Details Risk Management Barriers have been identified, and there are plans in place to mitigate Barriers have been identified, but there are no mitigation plans No barriers have been identified Health & Safety Management A Health & Safety Plan has been developed for this project and there are implementation strategies A Plan has been developed, or there is a generic Health & Safety Policy for the organization No Plan has been identified and there is no Health & Safety Policy for the organization O Community/Capacity Impact ated impact in increasing community knowledge about AQ Number of participants in previous years >100 50-100	10 55 3 0 55 3 0 25 10 5

	applicant can demonstrate some knowledge gains from post-program surveys etc.	3
	applicant cannot demonstrate post-program knowledge gains	0
Demonstra	ted impact in increasing community capacity to positively affect Hamilton AQ	15
	#participants who alter future behaviour in order to reduce emissions	7
	applicant can demonstrate non-negligible air quality impact from program participants	7
	applicant can demonstrate air quality impact from program participants, but hard to	
	quantify	3
	applicant cannot demonstrate air quality impact from program participants	0
	#participants who participate in ongoing fashion with AQ monitoring activities	3
	majority of program participants remain involved with ongoing monitoring activities	3
	minority of program participants remain involved with ongoing monitoring activities	2
	applicant cannot demonstrate that program participants remain involved with monitoring	
	activities	0
	Geographical Impact	5
	Impact entire City of Hamilton and surrounding areas	5
	Benefits city as a whole, with greater impact in certain wards	3
	Benefits only one specific ward or neighbourhood	2
	No impacts	0
	Air Quality Impact	45
Demonstra	ted impact on air quality in previous project years	15 max.
	Poduction in air quality emission levels	15
	Reduction in air quality emission levels Post-project data show a measurable decrease in pollutant levels throughout city of high-	15
	Post-project data show a measurable decrease in pollutant levels throughout city of high-	
	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants	15 15
	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of	15
	Post-project data show a measurable decrease in pollutant levels throughout city of high-priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants	15
	Post-project data show a measurable decrease in pollutant levels throughout city of high-priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined	15
	Post-project data show a measurable decrease in pollutant levels throughout city of high-priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants	15
	Post-project data show a measurable decrease in pollutant levels throughout city of high-priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined	15
	Post-project data show a measurable decrease in pollutant levels throughout city of high-priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants	15 12 10 5
	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants	15 12 10 5
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified.	15 12 10 5 5*
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels	15 12 10 5 5*
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years	15 12 10 5 5* 0
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge is city-wide Gain in scientific air-quality knowledge covers multiple wards	15 12 10 5 5* 0 30
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge is city-wide	15 12 10 5 5* 0 30 5 5
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge is city-wide Gain in scientific air-quality knowledge covers multiple wards	15 12 10 5 5* 0 30 5 5 5
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge cannot be quantified geographically Pollutants covered One point for each priority pollutant type, up to a maximum of 10	15 12 10 5 5* 0 30 5 5 3 0
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge cannot be quantified geographically Pollutants covered One point for each priority pollutant type, up to a maximum of 10 Three points for each high priority pollutant type, up to a maximum of 9	15 12 10 5 5* 0 30 5 5 3 0
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge cannot be quantified geographically Pollutants covered One point for each priority pollutant type, up to a maximum of 10 Three points for each high priority pollutant type, up to a maximum of 9 Time period covered	15 12 10 5 5* 0 30 5 30 10
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge is city-wide Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge cannot be quantified geographically Pollutants covered One point for each priority pollutant type, up to a maximum of 10 Three points for each high priority pollutant type, up to a maximum of 9 Time period covered An entire year	15 12 10 5 5* 0 30 5 30 0 10
Demonstra	Post-project data show a measurable decrease in pollutant levels throughout city of high- priority pollutants Post-project data show a measurable decrease in pollutant levels throughout city of lower-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of high-priority pollutants Post-project data show a measurable decrease in pollutant levels in defined neighbourhoods of lower-priority pollutants Future pollutant reductions are explained and verified. No post-project data showing measurable decreases in pollutant levels ted impact on air quality knowledge (scientific) in previous project years Geographic areas covered Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge covers multiple wards Gain in scientific air-quality knowledge cannot be quantified geographically Pollutants covered One point for each priority pollutant type, up to a maximum of 10 Three points for each high priority pollutant type, up to a maximum of 9 Time period covered	15 12 10 5 5* 0 30 5 30 10

One season	2
Less than one season	0
Quality of scientific data that form the basis for the proposal	5
Lots, high quality	5
Lots, moderate quality	4
Some, high quality	3
Some, moderate quality	2
