Healthy Environments

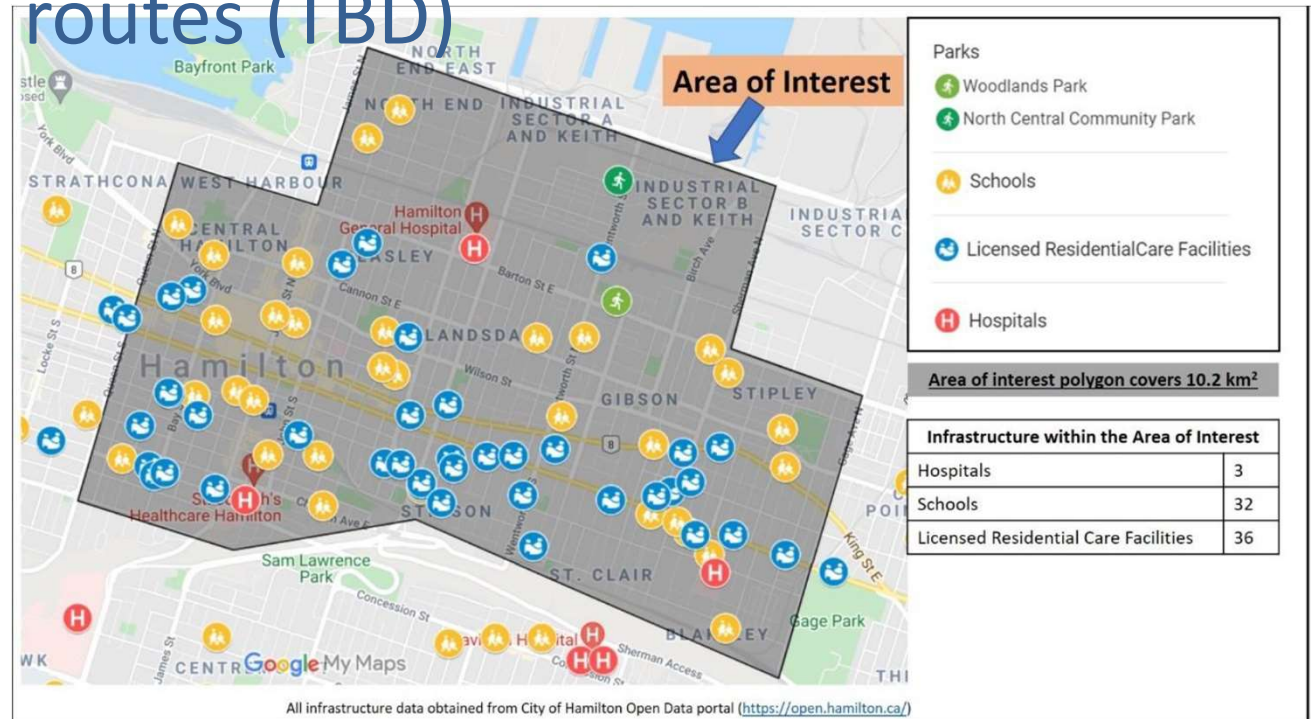

# Mobile Air Quality Monitoring

- How to monitor air quality in neighbourhoods without parks or open space suitable for air pointers?
- Looking for:
  - Reliable data, similar to air pointers
  - Similar or identical contaminants
  - Not dependent on electrical supply or lots of open space

# Pilot Project September 2021- February 2022

- Two fixed locations (based on recent air pointer locations)
- Two mobile routes (TBD)

# Next Steps

- How do the results compare with the air pointers?
- How do the mobile routes compare to the fixed locations?
- How do park locations compare to locations without green space?

Hamilton

THANK YOU
